

# Linux

## Linux on our clusters

All the servers used in the cluster are using GNU/Linux, and more specifically CentOS 7.

Having at least basic knowledge of Linux, and ideally with the command line (terminal), is a prerequisite for using our clusters. You are also expected to be able to write a simple Bash/Shell script, as this is needed to create *sbatch* scripts.

Explaining how to use Linux is out of the scope of this documentation, but you can find plenty of tutorials and explanation on the internet.

## External resources

If you never used Linux, you can start with those links to get some Linux and Bash tutorials :

- <http://linuxcommand.org> (highly recommended)
- <http://linuxtutorial.todolistme.net/>
- <http://vic.gedris.org/Manual-ShellIntro/1.2/ShellIntro.pdf>
