

Important information.

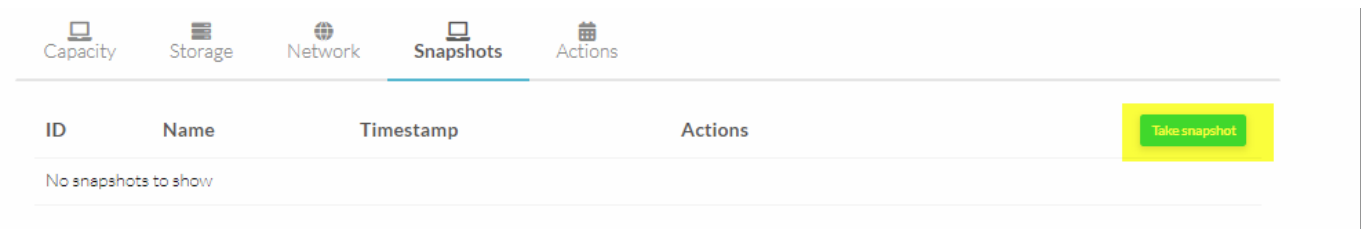

The VM need to be powerON

For performances and space use all snapshot are removed after 10 days

Open your VM and click on the snapshot tab

On the new tab click on take a snapshot :

Write a description for your snapshot

Snapshot

Snapshot name

Before update

Take snapshot

On the main page you should see now :

CapacityStorageNetworkSnapshotsActions

ID	Name	Timestamp	Actions	Take snapshot
0	Before update	15:10:38 17/03/2020	snapshot in progress	

Wait couple of minutes for the completion of the snapshot you can refresh by clicking the refresh button on the top When it's done the screen should look like :

You have two actions possible:

CapacityStorageNetworkSnapshotsActions

ID	Name	Timestamp	Actions	Take snapshot
0	Before update	15:10:38 17/03/2020	↶Revert ✕Delete	

[↶Revert](#)

Will restore the VM to the state when the snapshot have been taken

[✕Delete](#)

Delete will delete the snapshot without any change on the VM
